DETAILED ACTION

Claims 1-9 are pending in the application.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-3, 5, 6, and 9 rejected under 35 U.S.C. 102(b) as being anticipated by Harre et al. {Reactive & functional Polymers 41 (1999), pp. 111-114}.

Harre et al. disclose a process for preparing solid phase bonded 2-chlorotrityl chloride, comprising reacting solid phase bonded hydroxylated 2-chlorotrityl in the presence of a chlorination agent (thionyl chloride) and an organic solvent (methylene chloride) (see section 2.2 and 4.1).

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1, 4, 7 and 8 rejected under 35 U.S.C. 103(a) as being unpatentable over Harre et al. {Reactive & functional Polymers 41 (1999), pp. 111-114}.

Applicants claim a process for preparing solid phase bonded 2-chlorotrityl chloride of formula I, wherein dioxane is used as the organic solvent, HCl is used as the

chlorinating agent and the reaction time is from 6 to 96 hours. The Harre et al. do not teach these differences but such differences (i.e., solvent, chlorinating agent, reaction time, etc.), absent any unexpected results, would have been obvious to one having ordinary skill in the art.

One having ordinary skill in the art would have been motivated to experiment with different solvents, chlorinating agents and reaction times (depending on cost and availability of such reagents) so as to arrive at optimum results or at the very least arrive at other art recognizable alternative means of preparing the said solid phase bonded 2-chlorotriptyl chloride of formula I. The presently claimed invention would have been therefore obvious to one having ordinary skill in the art.
